PROBLEM STATEMENT

To develop app-based nutrient dashboard systems which can analyze real time images of meal and analyze it for nutritional content can be very handy and improve the dietary habit. Just like any other nutrition application, this app must have a certain functionality set and a number of basic features that help users to improve their physical condition and make health tracking platform differ from other existing applications. Diet service can offer more than just tracking food consumption, fitness activity, and calculating calories. Apart from this, it also provides food diaries, pregnancy nutrition plan, bodybuilding diet plan, vegan nutrition plan, diet-tracking, health activity tracker. Even if the primary task was to create an app for healthy nutrition diet plan , it is necessary to make the platform flexible to changes and adding new functionality in the future.
